

# COVID-19 “ Experimental” Vaccines

You have the right to make an informed decision about your health and your future and you may be asking: Should I take this experimental vaccine? Here are a few facts you should consider to help you make an informed decision.

## Facts:

1. According to the Pharmaceutical Companies themselves, these vaccines may not prevent the SARS-COV-2 virus: Evidence:
  - a. From the [Moderna](#) and [Pfizer](#) Vaccine Fact Sheets: *The (Moderna/Pfizer) COVID-19 Vaccine is a vaccine and may prevent you from getting COVID-19. There are no FDA approved vaccines to prevent COVID-19.*
  - b. However, the [handout](#) you get when they give you the shot, says it “...has been authorized to prevent COVID-19”, so they are lying about it. They are experimental and have been approved by FDA and CDC via an Emergency Use Authorization (EUA) but have not been fully tested.
2. These vaccines are experimental compounds that use “synthetic messenger RNA (mRNA)” housed in fat cells. In 2005 an [animal study](#) was done with SARS-CoV-1 mRNA vaccines on ferrets. Two doses were administered in the same manner as the SARS-CoV-2, aka, COVID-19 mRNA Vaccines. The ferrets showed no adverse reaction and seemed to be completely healthy. After some time, the ferrets were exposed to the SARS-CoV-1 coronavirus in the wild. The ferrets died. The mRNA Vaccine had caused a cytokine storm, a fatal cascade of exaggerated immune responses. The SARS-CoV-1 vaccines was not further developed.
3. Big Parma has asked for the normally required animal studies for the CoV19 vaccine to be waived. It was waived for EUA purposes, so there have been no long-term animal studies to see if this could happen with these new mRNA vaccines. WHY?
4. Because these vaccines may or may not prevent infection, and as [some reports show](#), only reduce symptoms, why take something that does not **prevent** the infection in the first place. It is a proven fact, with [hundreds of scientific studies to prove it](#), that Zinc and Zinc ionophores can prevent or mitigate infection in the first place; take them as supplements and you are protected. [The CDC recently said that 80%](#) of all people who were infected with COVID-19 were deficient in Vitamin D, another Zinc ligand (metal binding) ionophore (transporter). And this helps explains why Sub-Saharan Africa and other countries where most people are in the sun a lot [only have marginal deaths from this virus](#).
5. Hydroxychloroquine (HCQ) is a 65-year-old drug that has been shown [to stop an infection](#) if taken within the first 2 – 7 days of getting symptoms from COVID-19. So, if you are taking your preventative Vitamins like C, D, E and Quercetin, and/or other supplements like Melatonin plus Zinc, and for some reason this doesn’t prevent infection, you can stop it with HCQ + zinc; which is [readily available online](#).
6. Other synthetic drugs like Budesonide, Dexamethasone, Ivermectin as well as natural substances (i.e., vitamins, flavonoids, amino acids, and hormones) can be found in the Pharmaceutical Zinc20 database, a database funded by a subsidiary of NIH. This database is comprised of ligands, which carry metals like Zinc, Calcium and other micronutrients present in our blood serum and transport them across cell membranes into the body of the cell (cytoplasm) to help our immune system fight infection. Like HCQ, these synthetic drugs need zinc and other micronutrient metals to work. [Dr. Zelenko](#) uses the analogy “the drug is

## COVID-19 “ Experimental” Vaccines

the gun and zinc is the bullet” which is essential to stopping the viral reproduction and resulting infection.

7. Because these “Vaccines” are unproven experimental substances, we won’t know what side effects may occur for months or years to come, but it may result in a long-term unnatural human manipulation of our DNA building blocks. Do you really want to take that risk or risk your children’s lives? Especially since:
8. There is no pandemic. The number of deaths from COVID-19, [which is highly inflated](#), is no worse than a bad flu season. And your chances of dying from it, even if you do nothing to protect yourself as defined in #3 and #4 above, are [very small according to CDC data](#). Especially if you are under 60 years old.
9. Since both experimental vaccines are EUA, both Pfizer and Moderna are indemnified from all legal action resulting from patients experiencing side effects; including death. Since they assume no risk, you are the one who takes all of it! And according to [Dr. Sherri Tenpenny](#) that is not a good idea.
10. According to [Dr. Richard Fleming](#), Ph.D, MD, JD, a renowned cardiologist and researcher, there is a chance that the mRNA from the vaccine can be incorporated into your human DNA by action of the [reverse transcriptase enzyme present in the vaccine](#). This may affect your auto immune system and result in various auto immune diseases. However, for all you who are taking zinc supplements + ionophores and decide to get vaccinated, Dr Fleming stated that he believes Zinc does appear to interfere with the mRNA process of the vaccines to make the spike protein. This means it will probably reduce the symptoms you can get, so make sure you are taking them.
11. The vaccine nano particles of lipid/fat composition, in which the mRNA is transported into your cells, has never been used before in human trials and long-term health effects have not been determined. These lipid nano particles bind with the normal fats in cell membranes and allow [entry of thousands of the synthetic mRNA vaccine into your muscle cells](#). Unlike the virus RNA which has to enter through the ACE-2 receptors found on cells, the nano particles create new pathways into cells. Because the ACE-2 receptor sites are where the normal entry of the virus occurs, bypassing this means a greater amount of mRNA can enter the cell producing increased amounts of the spike protein exacerbating the immune response to the virus. This increased immune reaction can produce the very InflammoThrombotic Response (ITR) responsible for so many deaths. Again, long-term health effects are not known since long-term studies in lab animals have not been conducted. We humans have become the lab rats.
12. According to [Dr. Simone Gold, MD, JD](#), Pharmaceutical companies will track and measure all side effects from these experimental vaccines and enter data into the CDC [VAERS database](#) in order to perform statistics on us human guinea pigs/rats. Like real lab animals you cannot sue these pharmaceutical companies for suffering from any side effects after taking these experimental vaccines. However, companies requiring CoV19 vaccinations as a requirement for employment may be subject to legal action since it violates our civil rights.
13. The choice to take an experimental EUA COVID-19 vaccine is yours to make. Hopefully we have given you the facts to make a better-informed decision.

Good luck and good health to you all.
